

BNDR

Aidan O'Donnell
Peyton Andras
Sam Goodwin
Brandon Walton
Alejandro Marin

The Problem

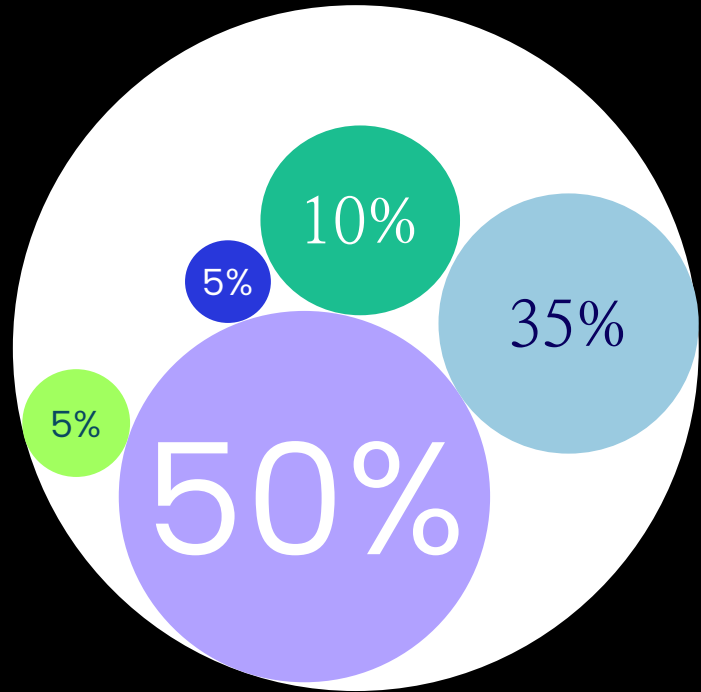

Making plans in group chats is too inefficient. Too much input from people attending. This leads to plans not being set until the last minute and whoever is organizing not having a definitive headcount.

Market Size

- Facebook
- Instagram
- Snapchat
- Twitter / X
- Other

According to: datareport.com

Our Solution

Have a definitive plan from the start and limit feedback from the users that are invited by restricting them to either opting in or out of a set plan.

Implementation

Front-end:

- Flutter/Dart

Flutter

Dart

Back-end:

- Firebase

API's:

- Google Maps
- Google Places

Firebase

Key Features

Find places/events near you

Users are able to browse location near them by searching a map or looking up specific places of interest.

Create itineraries

Once users find their desired locations, they can add the locations to their itinerary specifying the date, place, and time of their event.

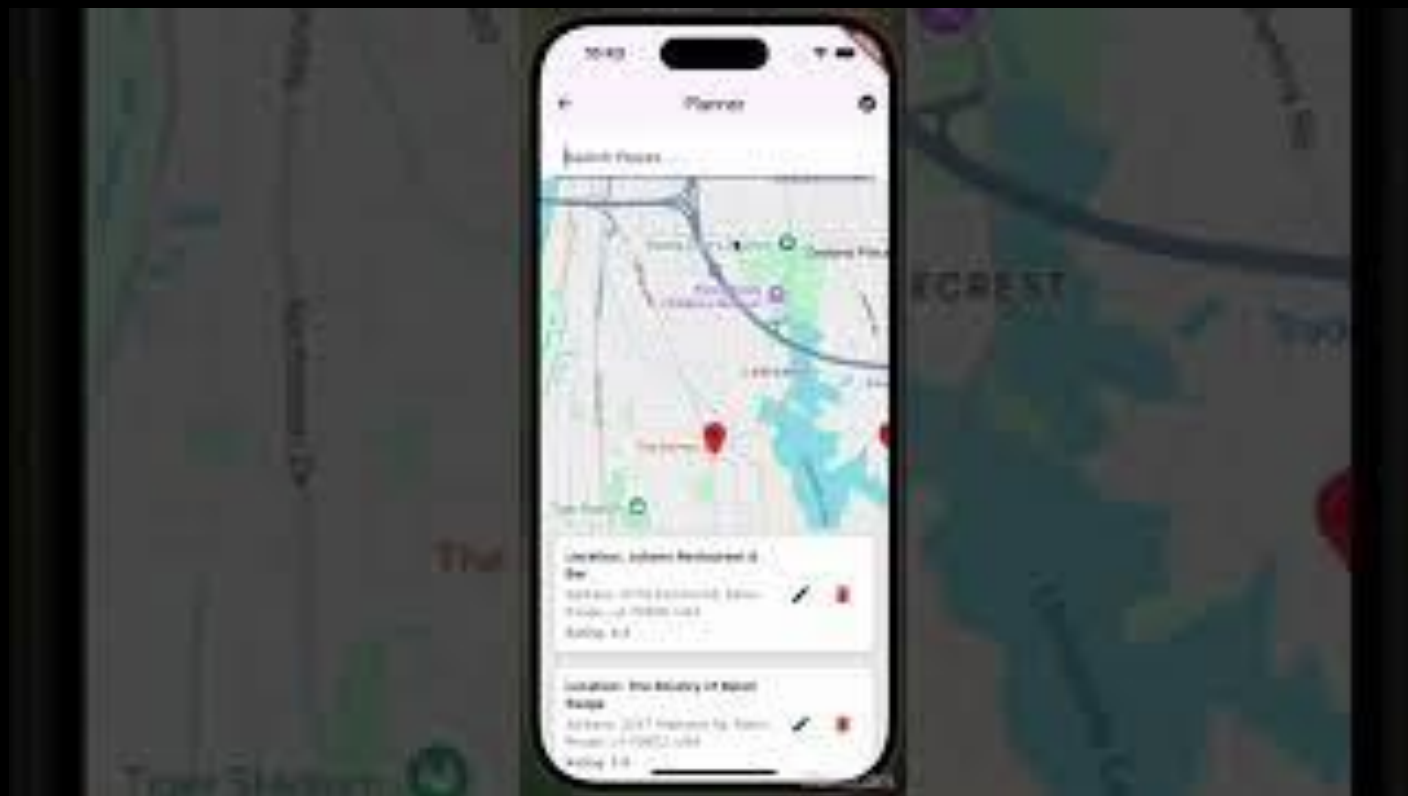

Invite your friends

After the itinerary is finalized, users can invite their friends from their list of added users and start their BNDR!
